

"Sustainable Wine of Chile" certification confirms TerraNoble's commitment to our noble earth and its ecosystem

It is with great joy that after a period of intense preparatory work for the different audits, TerraNoble has received the "Sustainable Wine of Chile" certification. This certification confirms that we comply with the requirements of the Sustainable Code of the Chilean Wine Industry.

The code is aimed at incorporating sustainable practices in the wine industry, based on requirements in three areas: vineyards, winery and in the relationship of the winery with its team and the community where it is inserted. Its objective is to promote the benefits of sustainable production of high quality grapes and wines. (www.sustentavid.org)

We are very happy to have obtained this certification, a fruit of team work well done at the time we celebrate our 25th anniversary. It reflects our principles and values and the discipline that we have always observed in caring for our noble land and its people.
